

# Securing the Perimeter: Credential Security Fundamentals

- **Speaker:** Shelby Palmersheim
- **Room:** CC 234
- **Time:** Sat 11:25 am - 11:55 am
- **Format:** Lecture (30 Min + Q&A)
- **Difficulty:** Introductory
- **Track:** Security / Privacy
- **Presenter Location:** In-person
- **Experience:** umpteenth time speaking

## Description:

Credential breaches rarely happen all at once — they happen when small gaps go unnoticed and access becomes easier than it should be.

This session examines how common password habits create real security risks and what it takes to protect credentials in a modern environment. It covers the fundamentals of credential management, including why password hygiene still matters, where most failures occur, and how stronger practices reduce exposure across systems and platforms.

Whether you're securing your own accounts or supporting an organization, this session provides practical guidance for taking control of access and keeping sensitive data protected. Attendees will leave with a clearer understanding of how to strengthen credential security in ways that are realistic, sustainable, and effective.

## Target Audience:

- All
