- **Presenter Location**: In-person
- **Experience**: Professional corporate entertainer and creator of the Living Cartoon Company; producer of the Linux Prepper podcast, specializing in original theater performances and researching failure.

Description:

This session is a hybrid of performance art and technical demonstrations. Explores the current state of AI on the individual. Presented as a series of short, back-to-back sketches and interactive segments, the show provides local, offline AI answers and serves as a companion to the Linux Prepper podcast's exploration of offline workflows. Using an “advent calendar” format where the audience helps decide the sequence of events, the performance balances humor and psychosis with a serious reflection on the intersection of FOSS, technology, and unknown futures. Note: This performance may contain adult content, may include strong language and themes of depression, suicide and violence.

Target Audience:

- FOSS enthusiasts and advocates for simpler solutions
  * Individuals skeptical of, or passionate about, the impact of AI
  * Attendees looking for an unconventional experience
