Caddy Reverse Proxy

Setting up Caddy Reverse Proxy, for two use cases:

- Local testing at *.example.domain.com
- Production deployment at *.domain.com
- DNS-Challenge and wildcards seem the apt solution.

Domains are registered through Porkbun.

- Caddy Porkbun Module

Local Testing

The porkbun module is problematic to setup, so could use suggestions.

Suggestions and advice?

Write in thoughts. also, there is a Lemmy posting about this
