livingcartoon.xyz is available for us to use together, and it's operation is inspired by James previously donating systems for Noisebridge known as Brony and Unicorn. This time, I'm offering a domain to start.

- Registered with Porkbun. Paid through the year **2036**.

Self-hosted services, and other experiments, could play very nicely with this domain!

- API access could be scripted, perhaps through a Git repo.
- DNS alteration encouraged. Porkbun uses Cloudflare by default.
- Self-hosting services we attach to this domain encouraged. Perhaps we try a service for x days and then script it going offline again.
- To be clear: there is no actual server or VPS associated with this domain **yet**.
- Decisions will be based on your xyz_suggestions. Also asked Lemmy here and here.

## Rules

We need to make some, together! What are your expectations and boundaries for such a project? Here is a start:

- Services run through this domain have no guaranteed uptime or functionality; it is up to you to help keep the services you want running, running.
- No Spam, Dox, or other abuse tolerated.
    - This is worth addressing as part of us getting started.

We want your input! Add your thoughts here by editing this page link → xyz_suggestions
